

IT Fundamentals Guided Notes (ANSWER KEY)

Lesson 3.4.2 - Application Architecture Models

1. What is a web browser?

That the entire application is installed on one single machine.

2. What are some common web browsers?

That the application runs on two systems.

3. What does N-tier mean?

It refers to an “n” number of machines, if you have 5 machines, then it would be a 5-tiered architecture

4. Give an example of a two tier.

Client-server architecture. Here, a server hosts the database and users connect to the database using their local machines
